

RAAS: New Inspection Document Management Module

Aviation Intertec Services is pleased to announce the release of a new module for its flagship product, RAAS.

Our new Inspection Document Management module is designed to allow you to house manufacturer source MRM/MPD data where each MRM task would become a data record in the module. Not limited to MRM tasks, it can accommodate all types of inspection data such as CPCP tasks and even custom tasks like, for example, an APU hours meter reading task that you might include in a 50-hour inspection.

An inspection document record contains accomplishment instructions, zone, access panel list, references to external documents, trade/skill expectations, parts list and graphic/PDF attachments (work cards and job instruction cards as PDF). In addition, the inspection document records also track aircraft effectivity, revision number, source document information, etc.

The addition of this data to your RAAS database will allow you to perform a wide range of functions including:

- Maintain all inspection document revision control from a central repository.
- Generate audit reports confirming correct and complete compliance within your inspection program.
- Automatically generate inspection sheets for higher-frequency inspections, allowing you to do away with custom company forms for the same purpose.
- Model heavy check visit packages in a pre-production environment for resource, tool, access and part planning.
- Accumulate history for routine to non-routine rectification task relationships.

For more information about RAAS and the Inspection Document Management module, please visit www.aviationintertec.com/raas.htm, or email Eric Hansen at ehansen@aviationintertec.com.
